Greenness Prediction

- Target Variables (#35): gcc of next 35 days
- Features Used (#25): Last 5 days gcc value i.e. gcc90 value from (t-1)th to (t-5)th day and gcc90 value from (t-5)th to (t+14)th day of lastt year
- Model used: Random Forest Regressor
- Cross-validation strategy used: Time Series Cross Validator (n_splits = 3)
- Train Data: Till 2019
- Test Data: 2020
- Missing values in the train data has been filled with interpolate(method = time) function

- Note
    - Model trained separately for each of the sites
    - Hyperparemeters of Random Forest Regressor are also different for each of the sites

Year-wise no. of observations (after creating features and dropping missing values)

Site Name	Train_Size	Test_Size
HARV	744	200
BART	743	201
SCBI	744	238
STEI	423	305
UKFS	43	199
GRSM	702	254
DELA	741	253
CLBJ	385	276
